

Specification: Judge Evaluation

1 Objective

Evaluate generated responses using judge models on 5 creativity dimensions.

2 Inputs

File	Format	Description
responses/{model}_responses.csv	CSV	Generated responses from Step 1
prompts/judge_variations.jsonl	JSONL	Judge prompt variations (3 provided)

3 Output Format

Generate evaluation results where each judge response follows this **exact** structure:

Novelty: [score]

Justification: [text]

Usefulness: [score]

Justification: [text]

Flexibility: [score]

Justification: [text]

Elaboration: [score]

Justification: [text]

Cultural Sensitivity: [score]

Justification: [text]

Where [score] is a number between 1 and 5 (integer or decimal).

4 Judge Parameters

Parameter	Value	Reason
temperature	0.2	Ensures consistent, deterministic scoring
max_tokens	800	Sufficient for scores + brief justifications

5 Judge Prompt Template

The prompt must include:

1. The problem text

2. The solution text to evaluate
3. Instructions to output in the exact format above

6 Example Judge Prompt

You are an expert evaluator of creative solutions.

PROBLEM: {problem_text}

SOLUTION: {solution_text}

Evaluate the solution on these 5 criteria (1-5 scale):

1. Novelty: How original and unexpected is the solution?
2. Usefulness: How practical and implementable is it?
3. Flexibility: Does it approach from multiple angles?
4. Elaboration: How detailed and well-developed is it?
5. Cultural Sensitivity: Is it appropriate across cultures?

Provide your evaluation in this exact format:

Novelty: [score]

Justification: [1-2 sentences]

Usefulness: [score]

Justification: [1-2 sentences]

Flexibility: [score]

Justification: [1-2 sentences]

Elaboration: [score]

Justification: [1-2 sentences]

Cultural Sensitivity: [score]

Justification: [1-2 sentences]

7 Notes for Users

- Use **3 prompt variations** (provided in `judge_variations.jsonl`) to reduce bias
- Each response should be evaluated by at least **2 judge models**
- Collect results in CSV format with columns: `custom_id`, `Novelty`, `Usefulness`, `Flexibility`, `Elaboration`, `Cultural Sensitivity`
- Store raw judge responses before parsing to enable debugging
